Metal Wheel Sets

Narrow Gauge

Scale wheel sets in five different diameters that cover the three major large scale, narrow gauge sizes (1:24, 1:22.5, and 1:20.3). These wheel sets are offered in both "O" Gauge, and Gauge #1. Wheel sets are packaged four (4) axles per bag.

Standard Gauge

Although these wheel sets were designed specifically for narrow gauge, they have been used successfully on 1:29 scale, and 1:32 scale standard gauge railroads. Most standard gauge modelers use either #2 or #3 size wheel sets.

The chart below shows size, scale, equivalent wheel diameter, and actual tire diameter.

<u>Size</u>	<u>1:24 scale</u>	<u>1:22.5 scale</u>	<u>1:20.3 scale</u>	<u>Actual Tire Diameter</u>	
A	16.5"	15.5"	14"	.689"	17.5mm
B	21"	19"	17"	.837"	21.26mm
1	24"	22"	20"	.984"	25mm
2	26"	24"	22"	1.083"	27.5mm
3*	28"	26"	24"	1.181"	30mm
4	30"	28"	26"	1.280"	32.5mm

*Replacement for LGB, USA Trains, Bachmann, and most "G" scale trains.

Features:

1. Flange height has been reduced to improve appearance without sacrificing performance.
2. Design of the wheel face is based on narrow gauge prototypes.
3. The wheel tread and flange are tapered, and have a fillet between them, as on the prototype.
4. Heavier metal wheels improve performance over plastic wheels, and lower the center of gravity of your cars.
5. All wheel sets are double insulated.
6. These wheel sets are compatible with all commercially available track and trucks, and have been tested on Code 172 rail through Code 332 rail extensively.
7. Each wheel set is individually inspected and tested for gauge, and alignment.
8. Manufactured in the U.S.A.
